Figure 210" ${ }^{\text {" }}$ Threaded Blanking Unions
Designed for use on manifolds, jumper assemblies and other installations where a blank cap connection is required. By using a tail sub and wing nut from a Figure 300, the Figure 210 is easily converted into a conventional union through which flow may be maintained. The cap is furnished blank as standard, but can be drilled and tapped for a 1/8"-1" NPT for a bleeder plug.
